

MOBILE APPLICATION MANUAL TESTING REPORT

– PRAM Edu

BUG ID: 01

Bug Title: UX Bug (Dark Pattern),
Home Screen showing advertisement banner at the
bottom

Screenshot:

Subscription Screen opened after tapping the banner

Description: Advertisement banner is displayed on the Home screen even though a dismiss option is shown. When the user tries to dismiss the advertisement, the app forces navigation to the paid subscription screen instead of closing the ad.

Expected Result: User should be able to easily close or dismiss the advertisement banner without confusion.

Actual Result: Banner remains on screen and interrupts normal navigation, creating confusion for the user. User is forcefully

redirected to the “Go Ads Free – Select Plan” subscription screen without proper consent.

BUG ID: 02

Bug Title: UI/UX Inconsistency,
Online Course Page – “Why Us?” Section
Screenshot:

Description: In the “Why Us?” section of the Online Courses page, the Call-To-Action (CTA) button “**Explore**” is inconsistently displayed across cards. While some cards provide an “Explore” option for further navigation, others do not, resulting in an inconsistent user interface.

Expected Result: All cards should display a consistent “**Explore**” CTA button, allowing users to access detailed information uniformly.

Actual Result: The “Explore” CTA is missing on Card 2: Hackathons & Subject Olympiads & Card 4: Opportunity to Earn Credits.

BUG ID: 03

Bug Title: Data Integrity / Functional Bug,
Missing Email Information in Job Listings
Screenshot's:

Description: In the Jobs for Students – Fresher category, the “Apply via Email” functionality is inconsistently implemented across job listings. Some job detail pages display a valid email address under “*Click on Email Below to Apply Manually*”, while several other job listings show

the value as “Not Specified”, preventing users from applying via email.

Expected Result: All job listings in the Fresher category should provide a valid and consistent application method, including a properly specified email address for manual application.

Actual Result: Some job listings display “Not Specified” instead of an email address. Other listings correctly show an email or valid application details. This inconsistency creates confusion and blocks users from applying for certain jobs.

BUG ID: 04

Bug Title: SOS Emergency Screen

Screenshot:

Description: On the SOS Emergency screen, the informational text “Misuse of SOS will result in fines”

appears as an important warning but is **not clickable** and does not provide any additional details or redirection. Users are unable to understand what constitutes misuse or what fines may apply.

Expected Result: The warning text should be clickable

Actual Result: The text is displayed as plain information only. No interaction, popup, or redirection occurs on tapping.

BUG ID: 05

**Bug Title: Functional / UI Blocking Bug,
eAI- Start your conversation here**

Screenshot:

Description: When the user taps on “**Start Your Conversation Here**” to type a message, a popup appears

saying “Our team is racing against the clock to roll out this feature in the next version. Stay Tuned!”. This popup blocks the input field and does not allow the user to start any conversation.

Expected Result: User should be able to type and start a conversation in the eAI chat input field.

Actual Result: A “feature coming soon” popup appears and prevents the user from typing or starting a conversation. Core eAI functionality is inaccessible, making the feature unusable.

BUG ID: 06

Bug Title: Functional / Navigation Bug,

eAI- Role selection

Screenshot:

Description: When the user selects any role (Student, Professors & Teachers, Office Staff, etc.) from the role selection section, the app redirects to the **Video Tutorials page** instead of opening role-specific eAI interaction or related content.

Expected Result: Selecting a role should open role-based AI interaction or relevant eAI features.

Actual Result: User is redirected to the Video Tutorials page, which is unrelated to the selected role.

BUG ID: 07

Bug Title: Functional Bug,

Service Providers

Affected options: Search & Admission School / College / Coaching classes with help of AI

Educational Career guidance with help of AI.

Screenshot's:

Description: Both options redirect directly to the EAI screen, which contains existing functional issues, preventing users from searching or receiving proper guidance or information.

Expected Result: Each option should provide relevant AI-based search or career guidance functionality.

Actual Result: Users are redirected to a faulty EAI screen where searching and information retrieval are not possible.

BUG ID: 08

Bug Title: Functional Bug,
Service Providers → Daycare / Preschool /
Kindergarten Owner

Screenshot:

Description: The Daycare / Preschool / Kindergarten Owner option does not respond when selected.

Expected Result: The option should open the related service provider screen.

Actual Result: No screen opens after clicking the option.

BUG ID: 09

**BUG Title: Data Availability Bug,
Service Providers**

Affected Options:

- Parent & Child Counsellors
- Baby Sitters
- Education Loan Providers
- Coaching Classes
- Hostels & PG's
- Bus & Vans (Schools / Colleges)
- Study Abroad Visa Consultants
- Shop Owner

Screenshot's:

Description: Selecting the above Service Provider categories displays “No Data Found” or “No Record Found,” with no service provider information available.

Expected Result: Relevant service provider data should be displayed, or a clear explanation should be provided to the user.

Actual Result: The application displays “No Data Found” or “No Record Found” without any explanation, alternative actions, or guidance for the user.

BUG ID: 10

Bug Title: UX / Usability Bug,
Service Providers

Screenshot:

Description: The application does not provide sufficient guidance or alternative actions when no service provider data is available.

Expected Result: Users should receive helpful messages or suggestions when data is unavailable.

Actual Result: Users encounter empty states without clear guidance, leading to confusion.

BUG ID: 11

BUG Title: UI / Content Overlap Bug,

Discover Screen

Screenshot:

Description: The Advertisement banner overlaps the main application content and reduces the visible area of the Discover screen.

Expected Result: Advertisements should not obstruct or overlap core application content.

Actual Result: The advertisement occupies excessive space and interferes with content visibility and user experience.

BUG ID: 12

BUG Title: UX/Usability,

Blood Warrior – Blood Donor Registration
Screenshot:

The image contains two screenshots of the Blood Warriors app. The left screenshot shows the home screen with a red background. At the top, it says '#ThalassemiaFreeIndia2035' and 'Welcome to the BW Tribe. Here is how you can contribute:'. Below this are social media icons for Instagram, WhatsApp, Facebook, and LinkedIn. There is a 'Chat with Veeru' button. A section titled 'Join the tribe' contains four buttons: 'Register as Blood Donor', 'Register for a Free HPLC Test', 'Sponsor Our Work - Donate', and 'Know more about our work'. The 'Register as Blood Donor' button is highlighted with a black box. At the bottom, there are links for 'Cookie Preferences', 'Report', 'Privacy', and 'Explore other Linktrees'. The right screenshot shows the registration form on the website 'www.bloodwarriors.in'. It has a search bar for 'Enter email address'. Below are dropdown menus for 'Gender', 'Date of Birth' (with a date picker), 'Location', and 'Source'. There is a checkbox for 'Blood Bridge Preference' and a link to 'Click here to know more about Blood Bridge'. At the bottom, there is a checkbox for 'I agree to the Terms of Service and acknowledge the Privacy Policy.' and a red 'Register' button, which is highlighted with a black box.

Description: The application allows users to submit the Blood Donor registration form without entering any required information, and no validation message or guidance is displayed. This is inconsistent with the HPLC Test registration form, which enforces required fields.

Expected Result: Users should be prevented from submitting the form if required fields are empty, and a clear validation message should guide them to fill in the missing information.

Actual Result: Users can click submit without filling any information, and no error or feedback is shown.
